SEO Audit — crownmoney.com.au

2 November 2026 · Prepared by Mat Ryder

Executive summary

Overall: 4/10. The site looks polished to humans but is close to invisible to crawlers. It is a JavaScript-only app whose raw HTML holds 8 words, it inherited an unfinished domain migration, and it has no content beyond 16 sales and calculator pages.

Area	Score /10	Headline
Technical	3	Client-side rendering, soft 404s, incomplete sitemap, heavy third-party scripts
On-page	6	Good structure once rendered; titles and descriptions too long; one cannibalisation pair
Content	2	No blog or guides; nothing targets non-brand informational searches
Off-page & trust	5	Real press and awards, but profiles point to the old domain and facts conflict
AI search readiness	2	robots.txt invites AI bots, but they can't render the JavaScript

The five fixes that matter most:

1. **Server-render or pre-render every page** so Google, Bing, AI crawlers and social previews see real HTML.
2. **Finish the domain migration:** page-to-page 301s from crownmoneymanagement.com.au and updated URLs on every profile.
3. **Build a guides hub** around "pay off mortgage faster", offset/redraw, money management and brand-trust queries.
4. **Fix the quick on-page items:** sitemap gaps, /pay-off-mortgage canonical, title/description lengths, duplicate calculator page.
5. **Unify the facts and grow reviews:** one address, one set of stats, an active Google Business Profile and automated review requests.

Audit method: rendered and raw HTML inspected in Chrome for 17 URLs on 2 November 2026, plus robots.txt, sitemap.xml, old-domain redirects and public web search. Backlink counts, keyword volumes and Core Web Vitals field data need Search Console, Semrush/Ahrefs or

PageSpeed Insights to confirm.

Technical SEO

The site is a client-side rendered React/Vite app: the HTML a crawler receives contains 8 words, no meta description, no canonical, no H1, no links and no schema. Everything that matters is injected by JavaScript after load. This is the single biggest SEO problem on the site.

What a non-rendering crawler sees on the homepage (raw HTML) vs what a browser sees:

Element	Raw HTML (pre-JS)	Rendered (post-JS)
Title	"Crown Money | Pay Off Your Mortgage Faster"	"Crown Money | Pay Off Your Mortgage in half the time | Australia's Leading Financial Coaching"
Meta description	None	186 characters
Canonical	None	https://crownmoney.com.au/
Open Graph tags	None	Present
H1 / H2s	0 / 0	1 / 13
Internal links	0	16
JSON-LD schema	0 blocks	Organization, WebSite, BreadcrumbList, FAQPage
Visible words	8	~1,435

Why it matters:

- **Google** renders JavaScript, but in a second, delayed queue. New and updated pages index slower, and rendering can silently fail.
- **AI search crawlers** (GPTBot, OAI-SearchBot, PerplexityBot, ClaudeBot) generally do not execute JavaScript. robots.txt explicitly invites them in, but they arrive to an empty page. Crown Money is effectively invisible to ChatGPT/Perplexity-style answers.
- **Social and messaging previews** (Facebook, LinkedIn, iMessage, Slack) read raw HTML only. Shared links show no description or image because OG tags are JS-injected.
- **Bing** renders JS inconsistently, which also feeds Copilot and ChatGPT search.

Other technical issues found:

1. **Soft 404s.** Any made-up URL (tested /fake-xyz and /blog) returns HTTP 200 and renders the full homepage. Google treats this as soft-404 noise, and any old URLs from a previous site version now quietly resolve to the homepage instead of 301-redirecting to their equivalent.
2. **Sitemap is incomplete.** sitemap.xml lists 11 URLs, all with the same lastmod (2026-08-09). Five linked calculator pages are missing: /tools/rent-vs-buy, /tools/net-worth, /tools/debt-recycling, /tools/withdrawal-impact, /tools/wishlist-impact.
3. **Contradictory signals on /pay-off-mortgage.** It is in the sitemap but its canonical points to the homepage, and it has 3 H1s and no schema. Pick one: noindex it as a paid landing

page and remove it from the sitemap, or self-canonicalise it as an SEO page.

4. **Heavy page weight.** Homepage made 126 requests to 23 third-party hosts (TikTok, Meta, HubSpot and others), ~1.3 MB transferred, ~690 KB of it JavaScript; full load ~6.1 s on a desktop connection. TTFB ~730 ms. Layout shift was 0, which is good. Expect weaker mobile Core Web Vitals; confirm in PageSpeed Insights and Search Console.
5. **robots.txt is fine** and references the sitemap. No crawl blocks found.

Fix: move to server-side rendering or static pre-rendering (Next.js, Astro, or a prerender layer like Prerender.io / vite-plugin-ssr). Each route must ship its own title, description, canonical, H1, body copy, internal links and schema in the initial HTML. Return a real 404 status for unknown routes.

On-page SEO

Once rendered, on-page basics are mostly in place: every page has one H1 (bar one), a self-referencing canonical and schema. The problems are length, duplication and keyword focus.

Page-by-page (rendered values):

URL	Title length	Description length	H1	Words	Schema	Issue
/	93	186	Helping Aussie Homeowners Pay Their Mortgage Off in Half the Time.	~1,435	Yes	Title truncated (~60 max)
/pay-off-mortgage	35	138	3 H1s	~1,166	No	Canonical → homepage; in sitemap
/about	74	202	Australia's Leading Specialists In Money Management	~1,045	Yes	Title and description long
/reviews	58	196	Crown Money Reviews & Client Feedback	~1,530	Yes	Description long
/success-st	63	183	Real	~683	Yes	H1 has no

URL	Title length	Description length	H1	Words	Schema	Issue
ories			Australians. Real Results.			keyword
/how-it-works	63	177	A Proven System For Financial Freedom	~475	Yes	Thin; H1 has no keyword
/mortgage-reduction-calculator	70	181	Mortgage Reduction Calculator …	~565	Yes	Good target; add depth
/tools	62	210	Financial Tools & Calculators	~376	Yes	Thin hub
/tools/rent-vs-buy	74	214	Rent vs Buy Calculator	~418	Yes	Not in sitemap
/tools/net-worth	64	195	Net Worth Calculator	~367	Yes	Not in sitemap
/tools/debt-recycling	80	204	Debt Recycling Calculator	~389	Yes	Not in sitemap; title long
/tools/withdrawal-impact	75	156	Home Loan Withdrawal Impact Calculator	~348	No	Duplicates next row
/tools/wishlist-impact	75	217	Home Loan Withdrawal Impact Calculator	~656	Yes	Same H1 and near-same title as above
/contact	64	196	Get In Touch	~286	Yes	Thin; no address shown
/target-market-determinations	58	186	Target Market Determinati	~613	No	Fine (compliance page)

URL	Title length	Description length	H1	Words	Schema	Issue
			ons			

Key issues:

- **Meta descriptions are all too long.** Every page sits at 156–217 characters; Google cuts at roughly 155–160 on desktop and less on mobile. The call to action gets chopped.
- **Titles over 60 characters** on 9 of 15 pages, worst on the homepage (93). Lead with the keyword, end with the brand.
- **Keyword cannibalisation.** /tools/withdrawal-impact and /tools/wishlist-impact share an H1 and almost the same title. Rename wishlist-impact around its own intent (e.g. "Cost of Spending From Your Redraw") or merge them.
- **Brand-led H1s** on /success-stories, /how-it-works and /contact waste the strongest on-page signal. "Mortgage Reduction Success Stories" beats "Real Australians. Real Results."
- **Social titles differ from page titles.** The homepage OG title says "Mortgage Reduction Specialists" while the page title says "Financial Coaching". Pick one positioning.
- **Images are good:** 50 of 51 homepage images have alt text.
- **Internal linking is shallow.** The homepage links to 16 internal URLs, mostly nav and footer. There is no body-copy linking between calculators, stories and how-it-works, and no content to link from.

Suggested homepage rewrite:

- Title (57): Pay Off Your Mortgage Faster | Mortgage Reduction | Crown Money
- Description (153): Australian homeowners use Crown Money's money management system to pay off their home loan years sooner. Free mortgage savings check in 2 minutes.

Content & keyword targeting

The site has 16 indexable pages and zero editorial content: no blog, guides or resource hub. It can only rank for its brand name and a handful of calculator terms, while the informational searches that feed this business are owned by Moneysmart, Finder, RateCity, banks and brokers.

What exists: homepage, about, how-it-works, reviews, success stories, contact, 7 calculators, a paid landing page, privacy and TMD pages. Six pages are under 500 words.

Biggest gaps (topic clusters to build):

Cluster	Example target searches	What to publish
Pay off mortgage faster	how to pay off mortgage faster australia; pay off home loan in 10 years; extra repayments calculator	Pillar guide + supporting posts, each linking to the mortgage reduction calculator
Offset vs redraw vs line of credit	offset account vs redraw; is an offset account worth it; salary into offset	Explainers with worked Australian examples

Cluster	Example target searches	What to publish
Money management system	how to budget with a mortgage; automate your finances australia; cash flow for families	Guides showing the Crown Money method in plain terms
Debt recycling & investing	debt recycling australia; pay off mortgage or invest	Supports the existing debt recycling calculator
Brand & trust queries	crown money reviews; is crown money legit; crown money cost / fees; crown money vs mortgage broker	A plain-English fees and "who this is for / not for" page, plus a comparison page
Client outcomes	case studies by loan size, family type, state	One URL per story (not one long page) with real numbers and dates

Why the brand-query cluster is urgent: sceptical third-party content about "mortgage reduction" programs already ranks for these themes. A Consumer Action Law Centre paper calls line-of-credit payoff marketing largely misleading, and Money Magazine's "Ask Paul" questions paying fees for these strategies. If Crown Money doesn't answer cost, risk and suitability on its own site, those pages answer it for them.
Content quality rules for this niche (YMYL): named author with credentials on every article (Scott Parry, Craig Parry, licensed coaches), a reviewed-by line, last-updated date, sourced statistics, and general-advice disclaimers. Google and AI answer engines both weigh this heavily for money topics.
Success stories: /success-stories holds everything on one 683-word page. Split into individual case-study URLs with the client's loan size, starting term, years saved and interest saved. Each becomes a long-tail ranking page and quotable evidence for AI answers.

Off-page, local & trust (E-E-A-T)

The brand moved from crownmoneymanagement.com.au to crownmoney.com.au, but the migration was only half done. Old-domain authority is being funnelled to the homepage, and most third-party profiles still point to the old domain.
Domain migration:

- crownmoneymanagement.com.au/blog redirects to the crownmoney.com.au **homepage**, not an equivalent page. Every old URL appears to collapse to /. Google treats mass redirects-to-homepage as soft 404s, so link equity from old article and page URLs is largely lost.
- Fix: pull the old URL list (Search Console, Ahrefs/Semrush top pages, Wayback Machine) and map each old URL with a page-to-page 301. Rebuild any old article that earned links.

Profiles still on the old domain:

Platform	What it shows	Fix
Trustpilot	4.6 TrustScore from 20	Request a domain change;

Platform	What it shows	Fix
	reviews; flagged as not inviting reviews recently; listed under the old domain	start automated invites
LinkedIn	Website = old domain; HQ Port Melbourne; claims "$32,400 a year" average paydown; ~496 followers	Update URL, address and figures
Facebook	Old domain; Level 19, 180 Lonsdale St, Melbourne; 6 recommendations	Update URL; align address
ZoomInfo	Old domain	Claim and update

Inconsistent facts across the web weaken trust signals for both Google and AI answers:

- Address: Port Melbourne (LinkedIn), Lonsdale St Melbourne (Facebook), Adelaide/SA (press coverage of Craig Parry). The site's contact page shows only a phone number.
- Headline stats: "$32,400/year"(LinkedIn)$vs$"39,327/year" (Innovations of the World); "established 2004" vs "23+ years".
- Pick one canonical set of facts, publish it on /about with a date and methodology, and update every profile to match.

Reviews and Google Business Profile: no Google review count is visible on the site, and the brand SERP is crowded by Crown Resorts, Crown casino spam and US "Crown Mortgage" lenders. Claim and fully complete a Google Business Profile at the real office address, then drive reviews from settled clients (the company already lists review collection as a client-services duty in a job ad). Add Review/AggregateRating schema only for first-party reviews.

Existing link assets to build on:

- Broker News feature on the money management program (CEO Scott Parry).
- The Adviser Elite Broker Q&A and podcast with Craig Parry.
- Innovations of the World profile citing three consecutive SA Best Boutique Mortgage Brokerage wins (2021–2023).
- Udemy course and Skool community, both linkable from the site.
- Ask each publisher to update links to crownmoney.com.au.

Compliance trust signals: the footer shows ACL 388 279, Crown Lending ACN 119 504 862 and MFAA membership, which is good. Add the ABN, a physical address, a named-team page with licence details, and an "about our results" page that substantiates claims like "half the time" and "every 23 days".

Competitor snapshot

The pages that surface for "pay off mortgage faster" style searches are publishers and government sites, not other coaching firms, and every one of them is a long, crawlable, server-rendered guide. Crown Money has no page competing in that set.

Site	Example ranking page	What it does better
Moneysmart (ASIC)	Pay off your mortgage faster	Government authority; plain answers on offset, fortnightly payments, avoiding interest-only
RateCity	Mortgage reduction strategies	Owns the term "mortgage reduction" in an article format
Finder	5 ways to pay off your home loan faster	Huge domain authority, cites surveys, links to comparison tables
Peakifi	How to pay off your mortgage faster (2026)	Year-dated, table of contents, worked offset examples, hub of related posts
Roopon	Offset, extra repayments and refinancing	Checklist format that AI answers lift easily
Mortgage World Australia	Clearing debts and paying off your home loan early	A broker using a credentialed author bio and a lead form on an article

Takeaway: Crown Money's angle (coaching, automation, accountability, real client results) is more differentiated than any of these. None of them have 7,000+ client outcomes to draw on. The gap is purely format and crawlability.
Rankings here are from general web search, not a google.com.au rank tracker. Verify positions and keyword volumes in Semrush or Ahrefs (location: Australia) before committing the content budget.

Prioritised action plan

Fix rendering and the migration first; nothing else compounds until crawlers can read the pages and old authority flows to the right URLs.

Week 1–2: quick wins (low effort, high impact)

- ☐ Add the 5 missing /tools/* calculators to sitemap.xml and resubmit in Search Console
- ☐ Decide on /pay-off-mortgage: noindex + remove from sitemap (if paid-only), or self-canonical + single H1
- ☐ Rewrite all titles to ≤60 characters and descriptions to ≤155 characters, keyword first
- ☐ Differentiate /tools/wishlist-impact from /tools/withdrawal-impact (new H1, title, intent) or merge
- ☐ Swap brand-led H1s on /success-stories, /how-it-works, /contact for keyword H1s
- ☐ Update website URL on LinkedIn, Facebook, Trustpilot, ZoomInfo, Udemy, Skool
- ☐ Claim/complete Google Business Profile with one consistent address

Month 1: technical foundation (high effort, highest impact)

- ☐ Ship server-side rendering or static pre-rendering so each route's HTML contains title, meta, canonical, OG tags, H1, copy, links and schema

- ☐ Return a true 404 status for unknown URLs
- ☐ Build a page-to-page 301 map from crownmoneymanagement.com.au old URLs
- ☐ Audit third-party scripts (23 hosts on the homepage); defer or drop non-essential pixels; check mobile Core Web Vitals in PageSpeed Insights
- ☐ Verify the result with "URL Inspection → View crawled page" in Search Console

Months 2–3: content engine

- ☐ Launch /guides (or /blog) with a pillar page: "How to pay off your mortgage faster in Australia"
- ☐ Publish 2–4 supporting articles a month from the clusters above, each with a named, credentialed author and links to a calculator
- ☐ Publish a transparent fees, suitability and "how we calculate our results" page
- ☐ Split success stories into individual case-study URLs with real figures
- ☐ Publish one canonical facts page (founding year, clients helped, average paydown) and align every profile to it

Ongoing: authority and reviews

- ☐ Automate Google and Trustpilot review requests at settlement and at milestones
- ☐ Pitch data stories to The Adviser, Broker News, Money Magazine and news.com.au using client outcome data
- ☐ Ask existing publishers to update links to the new domain
- ☐ Track rankings for core terms monthly; review Search Console coverage and soft-404 reports
